Cloud Storage for Businesses of All Sizes.

FileCruiser with the PROMISE Cloud Storage Solution

FileCruiser Overview

FileCruiser is a complete cloud solution which includes Enterprise File Synchronization and Sharing (EFSS) features and a server-storage hardware platform for enterprises and small to midsized businesses. It helps users easily build their organization's own Dropbox-like cloud storage services which enable them to realize the benefits of the cloud, including anytime, anywhere data access, easy file sharing that puts an end to FTP, and improved collaboration capabilities for group projects. FileCruiser is able to support up to thousands of accounts and hundreds of terabytes of storage space.

FileCruiser can be implemented on various hardware platforms, including on a 3U-16 bay Intel x86 server-storage appliance which is suitable to be deployed by SMBs. In addition, if performance demands it, FileCruiser can be implemented on multiple Intel x86 1U servers connected to PROMISE VTrak or Vess storage. This solution provides the redundancy to protect both servers and storage.

Solution for BYOD

Simple, Secure Sharing from Anywhere

Access and Sync with Any Device

FileCruiser intelligently syncs all of your files across all of your devices, so you always have the most up to date file no matter where you are and no matter which device you are working on. IT administrators can remain in control be setting limits on the size and types of files users can upload and sync to FileCruiser.

Easily Sync Large Files

With FileCruiser you can efficiently sync even massive files and if the connection is interrupted the file will resume transferring from the point it stopped as soon as the connection is restored.

FileCruiser makes it easy to get your whole team on the same page with a ton of collaboration tools that help you create a super-efficient shared workspace.

Manage Your Team

Team members could come from a mix of local domains and AD/LDAP domains. The team lead is able to manage their team by adding/removing/disabling/enabling memberships.

Team Member Scope

A 'Team Scope' is a viewing space that team members can see. Within a team, each person may have different aspects of a project that they need to focus on, so different scopes can be configured for each team member.

Team Member Access Permissions

The role of each member is assigned by the team lead after the team is created and when the member is added. There are a set of roles defined with different access rights (or permissions), including READ, WRITE, SHARE INSIDE (inside the domain), SHARE OUTSIDE (outside the domain), and more.

Team Group Architecture

Share by Demand

Sharing with Shared Links

FileCruiser lets users easily upload files and folders to the server which will generate a unique downloadable link for each file and folder. The content from the shared hyperlink can be password protected and users can set an expiration date.

Sharing to Teams

FileCruiser also helps you easily manage and share your content to users or teams who have an account in FileCruiser. The file will be copied to the user's folder automatically. You can define who can access, read and write the specific file or folder you shared.

Online Video Stream

With FileCruiser, you can stream videos or music on any of your client devices without having to download the entire file. This saves precious space on your tablet or smart phone and enables you to conveniently keep all your files in one place online.

Online Video Stream

Remote Wipe

Call Enterprise Level Data Security

With your team working all around the globe on multiple devices, it's important to remember how important data security is to your business.

Secure File Transfer

When your data is stored and transferred with FileCruiser it is protected using 256-bit AES encryption.

Remote Wipe

The FileCruiser server will record all of your FileCruiser client devices. The 'Remote Wipe' feature enables you to block the lost devices and delete the folder you synchronized with FileCruiser.

Lock Files

You can lock any file and folder which means no one can modify these files until you unlock it.

2-factor Verification

Add extra protection to your mobile app. An extra 4 digit passcode will be requested while logging in from your mobile devices

Audit Trail

FileCruiser makes it easy for the IT team to stay in control by tracking all user behavior, including file sharing, deleting and adding files and much more.

Windows AD and LDAP support

FileCruiser supports multi-domain authorization which means IT administrators can add more than one authorization domain and manage all accounts from a single page.

Multi-Architecture support

FileCruiser provides deployment architectures on different scales so you can select the most suitable solution for your organization. VA2600 is a 3U-16 bay appliance and it is designed for SMEs. VR2600 is designed for medium to large-sized organizations and provides the service hardware as well as scale out computing capability.

Audit and Monitor

IT administrators can monitor file and user activity and get a complete audit trail by generating reports on all user behavior, including sharing, deleting and adding files and more.
